

## Better heating at the Mayford Estate

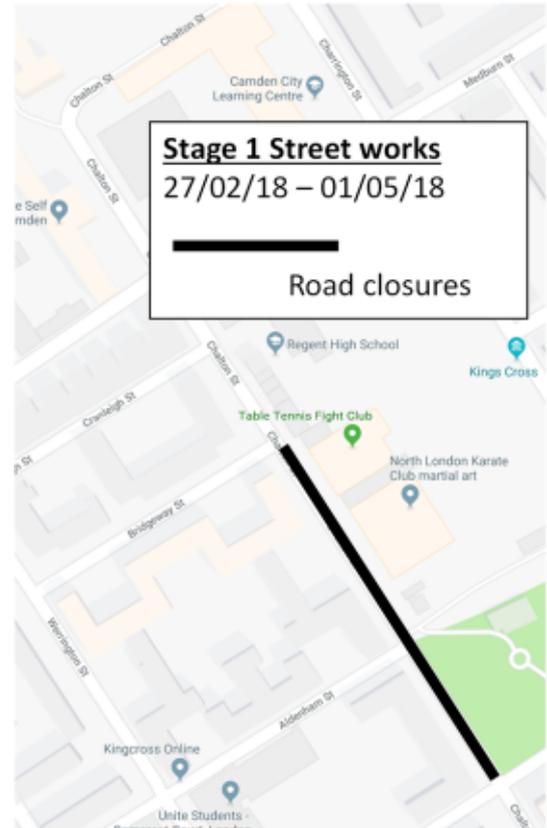

**From Autumn 2018, the Mayford Estate will be connected to the Somers Town Energy network.**

Following the consultation at the end of 2017, we are pleased to confirm that the project has been approved and works will begin shortly.

The project will begin with street works on Chalton St from the Junction of Polygon Rd up to Bridgeway St (Stage 1) for the next 9 weeks. Road diversions and parking suspensions will be in place along this section.

Construction works within the Mayford Plant room and further street works along Chalton St (Stage 2) will be carried out during the summer and we will send out a further update with more information closer to the time.

As a reminder, there will be no works required within your flat and the works are being carried out at no cost to tenants or leaseholders. Where short disruptions to your heating supply are required we will try our best to minimise disruption as much as possible and provide appropriate notice.

### Our Contractor

Vital Energi will be carrying out the construction work on behalf of London Borough of Camden, and have a 15 year agreement to operate and maintain the network once complete.

Vital Energi have successfully delivered all phases of Somers Town Energy and have a wealth of experience with District Heating projects in Central London and across the UK.

### Keeping up to date

Important notices regarding the works will be sent to all residents. Regular updates on project progress will also be posted on notice boards around the estate and on our website - [www.camden.gov.uk/DE](http://www.camden.gov.uk/DE).

In the meantime, if you have any further concerns or questions about the plans, feel free to get in touch and we will do our best to help.
