

COVID-19 in Camden

Last week (08 February – 14 February)

Deaths 9

New cases per day average 23

Number of daily cases in Camden, 2 March 2020 to 14 February 2021

It is important to note that as mass testing wasn't available until 28th May, many cases early on will not have been tested. Therefore, current number of cases cannot be compared to the start of the pandemic.

Camden has had a total of **13,426** confirmed cases, **2%** of London's total.

Weekly incidence rate = 60 per 100,000

This is lower than London's rate at 105.4 per 100,000 and is the lowest amongst the 32 London boroughs. This is a decrease from last week (99.6) and is rated red.

6% of tests are positive

For every 100 tests taken 6 on average are coming back positive. A weekly percentage between 4% and 7.5% is rated amber.

These indicators are RAG (red-amber-green) rated to indicate whether they are good or bad.

London's R number = 0.6 – 0.8

London is similar to, but slightly lower than the England estimate of 0.7 - 9.0. An R number between 0.6 and 0.8 means that on average every 10 people infected will infect between 6 and 8 other people. If the R value is above 1 the pandemic is growing, if it is below 1 the pandemic is shrinking.
